BRITISH ISLES.

Scale of British Miles

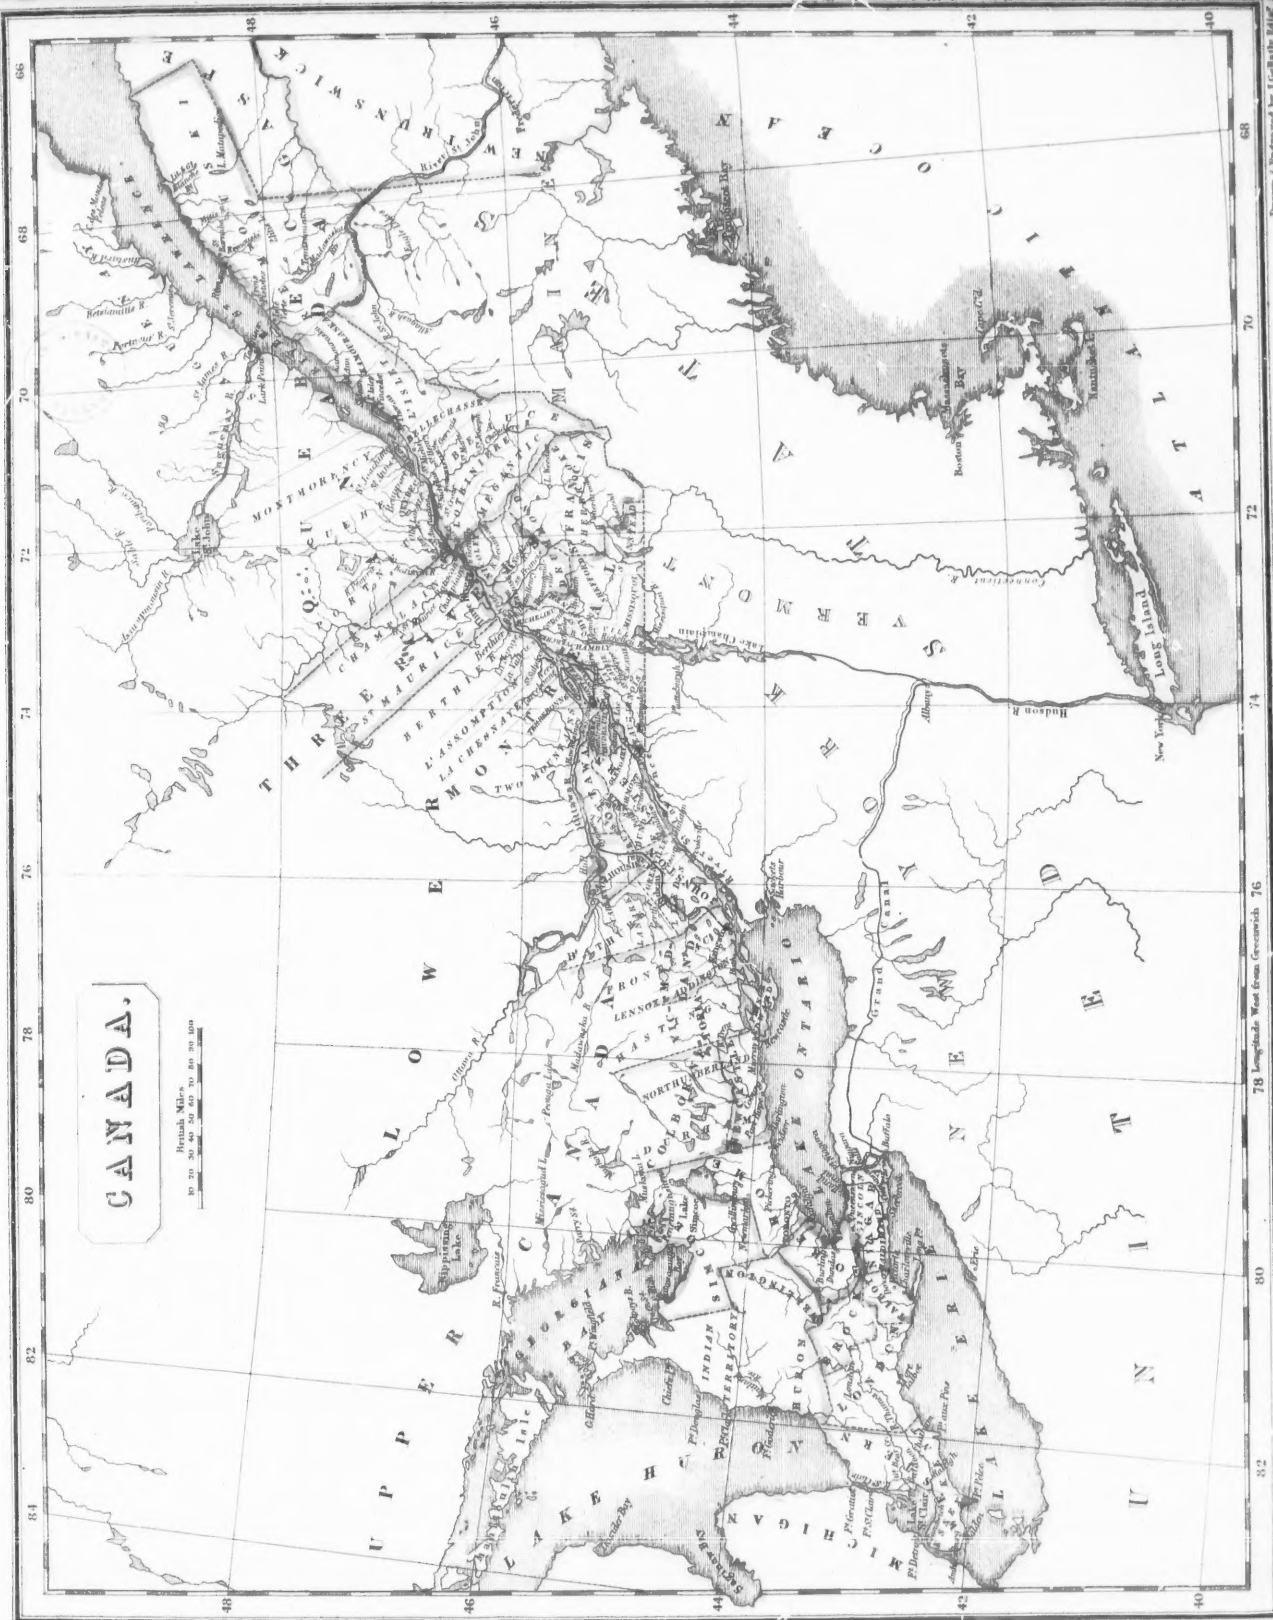

Drawn & Engraved by J. Colburn & Co.

Published by Imeson & Ramsay, Montreal.

GOULINLOCK'S GEOGRAPHY.

"This System of General Geography is adapted to the instructive mode of tuition, embracing also the outlines of an elementary course. Scriptural Geography, an introduction to Astronomy, and problems on maps and the globe. It also contains what has heretofore been a desideratum in all our geographical, about eight pages of British America, as I suppose everything a very creditable publication, both to the authors and to the publishers."—*Essexian*.

"The plan of this very useful work is admirably suitable to the use for which it is designed, and the execution appears highly satisfactory. We are contented at the attention of all engaged in the management of schools, to the full expectation to see it become one of the classics of Canada."—*Niagara Chronicle*.

"Its plan is simple and well arranged, and the work is very compact and terse. As a general reference book it is valuable, as it gives the chief statistical features of every country on the globe."—*Toronto Mirror*.

"This work, which has been compiled and arranged for the use of schools in British North America, is on a comprehensive plan, and includes not merely the elements of Geography, as applicable to the different countries, but also enters upon a description of their natural peculiarities, products, manufactures, and commerce, and contains, in addition, a curious and accurate survey of the use of the globe."—*Toronto Herald*.

"A good compilation, with the addition of much Canadian matter. The Provincial Gazette speaks in very laudatory terms regarding this useful publication. We wish it an extensive sale, which, indeed, its intrinsic merit deserves."—*Hamilton Journal*.

"A compilation very well adapted for the use of the Provincial schools. A few pages devoted to British America, have been judiciously introduced into it."—*British Canadian*.

Extract of a Letter from a Rev. R. H. Farrington, Superintendent of Education for the Township of Whitby, to Mr. Seabolt:

"I have carefully examined G. & A. Goulinlock's Geography, lately published by you, and am happy to find it a valuable compendium of Geography, both because of the information it contains and of its adaptation to the common schools of the province. The arrangement of the work is good, and such as, with the exercises, will almost of necessity lead a teacher, of even small experience, to adopt a tolerably correct method of teaching its contents."

"The mode adopted by the compiler, to give assistance towards a correct pronunciation of the proper names, is simple, and will be highly valued by many whose object is the acquiring accuracy in their pronunciation have been limited."

"The value of the work, as a text book for schools, is, I conceive, greatly increased by the Outline of Scriptural Geography. Something of the kind is necessary wherever the Scriptures are employed as a reading book; and this work supplies what I have long vainly wish to obtain, as an aid to their general perusal of the sacred volume."—*September 24th, 1845.*

"This little work embraces a great deal of useful information for schools, and we take the opportunity of recommending it to the notice of school commissioners and teachers."—*Kingston Chronicle & Gazette*.

Extract of a Letter from E. P. Thornton, Superintendent of Schools, Hamilton, to Mr. Seabolt:

"I have examined the Geography, which you have just published, and am in a situation to say that, as a *Canadian School Geography*, it is far superior to any that has hitherto been offered to the public. The Scriptural Geography is a feature which greatly enhances its value in schools, where the sacred scriptures are a possession, and ought to be a religious education in its favour."—*1st of October, 1845.*

"This work, to which we highly approve, contains a great quantity of topographical and statistical information, most judiciously selected, and arranged in a manner which is an object of study. The details regarding the British possessions on this continent, are very ample, and such as should be in the possession of every well-regulated school in the Province."—*Brookville Standard*.

"This work forms a nearly compact volume of about 250 pages, and appears to combine as much practical information on the subject as it is possible to compress within that extent, while on the whole correct in its statements. Although compact, it is sufficiently extensive to give the learner a comprehensive knowledge of the various countries of the globe, and we commend it to the notice of teachers and parents."—*Kingston Herald*.

"This work is obviously the result of a great deal of study and labor, and is presented in a simple and plain manner, and the arrangement is simple, progressive, and correct. We read it with pleasure, and the impressing of the proper pronunciation of names is attended to, and we cordially commend it to the attention of teachers, and this we do the more confidently, as we understand the authors are teachers of long experience and extensive practice themselves, and therefore may be relied on to be competent judges of what is required to facilitate the progress of learners in this or any particular branch of knowledge which may occupy their attention and engage their pens."—*Montreal Gazette*.

"The opinion formed from the title, is not disappointed on an examination of the work. So great an amount of useful information is so often presented in so small a compass, or more interesting volume. We shall give it by us as a useful book reference."—*St. Catharines Standard*.

"It is admirably adapted for the use of British American schools; the design of the work is excellent, and most fully has the design been carried out by the authors, who deserve the thanks of the public of the British Empire."—*Kingston Herald*.

"We have much pleasure in stating that Messrs. G. & A. Goulinlock, who were so long associated in the compilation of one of the best arithmetic exercises, have also published a valuable and useful work, the *Canadian Atlas*, for such an excellent manual of Geography as the use of the work, which we consider to be a desideratum in our provincial schools."—*Montreal Courier*.

"We have been favored with a copy of this excellent work by the publisher, Mr. Seabolt of Toronto, which for its comprehensive format, and judicious arrangement, is, perhaps unequalled, and shows a great quantity of design, but before attempting an opinion on the continent, but when the authors seem to have conceived with judgment and industry and satisfaction, accomplished."—*London Times*.

THE CANADIAN SCHOOL ATLAS.

"CANADIAN SCHOOL ATLAS.—The above is the title of a book published for the use of Canadian Schools. The work contains ten beautifully executed maps, the whole series coloured in excellent style. The work is one of great comparative magnitude, and reflects the highest honour upon the enterprise of the publishers, to whom the *Quebec Standard* has given the honor of its own. The book has, we have received the approval of the Teachers of the city, and the extremely low rate at which it is proposed, we have the hope that it may speedily come into general use in the whole of the British Colonies."—*Literary Garland*.

"The work is got up in an exceedingly neat style, and reflects much credit upon the publishers. We deem it quite unnecessary to recommend such a volume to the public for its utility, as a School book, must be needless to say, if it is not useful at a very low price."—*Montreal Courier*.

"In addition to the value of this Atlas, as a School book, its low price is a recommendation to its being generally used."—*Montreal Herald*.

"We have been favored with a copy of the *Canadian School Atlas*, recently published, and eminently calculated, both by its execution and its extremely low price, to facilitate that necessary branch of education, geography, hitherto so neglected in Canada."—*Montreal Transcript*.

"The manner in which it is got up does credit to the publishers. It is a foolscap folio size, bound in cloth with ten Maps. We believe it is the only work of the kind in Canada, well combined with the richness of its execution and the lowness of the price. Cannot fail to make it a desirable work to put into the hands of our scholars."—*Montreal Quebec Gazette*.

"It is with great pleasure that we call public attention to this work, as it is one which is in the highest degree creditable, not only to the publishers but to the country itself. The Maps, ten in number, are considerably enlarged upon a large scale, and the execution of the work is equal to any thing in America. What at its price, we hesitate not to say, makes it the cheapest book of the kind that we have ever seen."—*Toronto Colonist*.

"The Maps are beautifully, and, so far as we are able to judge, correctly colored, and the volume is presented to the public in a form and with a finish very creditable to the judgment and taste of those who present it. While its publication is a evidence of an enterprising spirit we should be glad to witness the success of this every depiction of useful knowledge. Much of the value of the work is derived from it being a *'School Atlas'*, and so this, compared to it, is a more for eye, Colonial youth."—*Christian Guardian*.
